Drink Safe™

Drink Safe™ Drinking Solutions

With the presence of lead in our drinking water becoming a growing concern in our schools and community, the demand for a 'safer' quality of drinking water is on the rise. In providing several options in materials, mounting and activation styles, the following 'Drink Safe' range endeavours to provide the perfect solution for any application and budget.

316 SS Drink Safe™

Manufactured in premium 316 Stainless Steel there is an almost zero risk of lead contamination in this material. 316 SS also has increased corrosive resistant properties which make this range ideal for beach, coastal and harsh outdoor environments.

Chrome Plated Brass Drink Safe™

Manufactured using high quality DZR solid brass with less than 0.25% lead content*. A competitive option that meets the requirement for Drink Safe™ drinking water in everyday applications.

Piezo Touch Activation

Encompassing a unique water 'purge' setting the Electronic Piezo Activation Technology paired with some of our products is the ideal solution to prevent the risk of lead contamination even after prolonged periods of stagnation.

*As 'lead free' is not currently defined by law or plumbing codes in Australia and New Zealand, we have based our definition of Drink Safe™ on the USA's SDWA definition of lead free "Not more than a weighted average of 0.25% lead."

Drink Safe™ 316 S.S.
