- Rear Fixed: DRDC-RF

Product Info:

- Sits inside wall cavity
- Highly vandal resistant
- Heavy duty push button bubbler
- Concealed plumbing and fixings
- 40mm waste supplied
- Optional bottle filler tap
- Rear fixed model supplied with front access panel

DRDC-RF

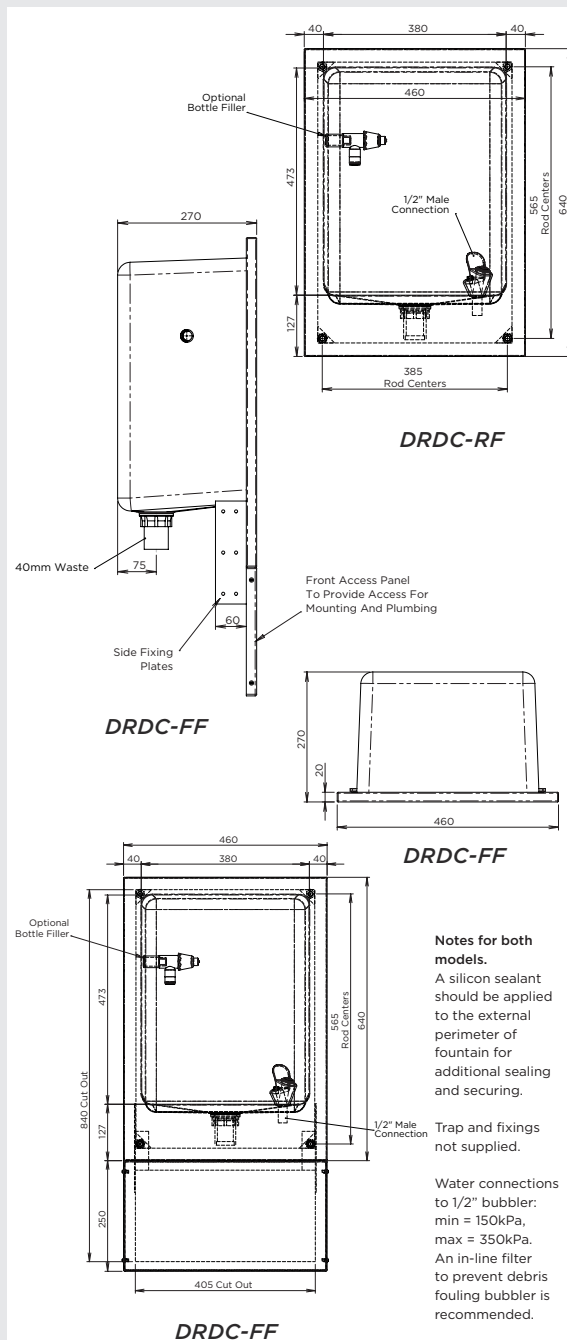

INSTALLATION NOTES

Rear Fixed Model (DRDC-RF)

1) Fountain is affixed to support structure via four stainless fixing straps integrated into rear of fountain body. 2) Fixing straps require holes to be drilled on site and screwed into stud work. 3) Rear access must be provided to connect 1/2" water supply to bubbler and 40mm trap for waste.

Front Fixed Model (DRDC-FF)

1) Fountain is affixed to wall via an offset bracket at the top of the fountain and via integral fixing plates located internally at either side of the access panel. 2) Internal fixing plates are for securing (once access panel is removed) to internal wall structure. 3) Connections to plumbing (waste outlet & bubbler) are accessed via removable access panel.

Notes for both models.
A silicon sealant should be applied to the external perimeter of fountain for additional sealing and securing.

Trap and fixings not supplied.

Water connections to 1/2" bubbler:
min = 150kPa,
max = 350kPa.
An in-line filter to prevent debris fouling bubbler is recommended.
