## INSTALLATION NOTES

1) Trough is generally mounted on a joinery top. 2) Cut out for trough is overall L x W dimensions (including end flanges) minus 20mm, which leaves a 10mm overhang on all four sides for mounting on bench top. 3) Fixing clips are tightened to locate and secure copper studs to the inside of the cutout. 4) A silicon sealant or adhesive tape can be applied to the underside perimeter of flange for additional sealing and securing where required.
