- Available pre-plumbed with tapware

INSTALLATION NOTES

1) Trough is self-supported by a stainless steel SHS frame. 2) Feet are adjustable to ensure trough is perfectly level. 3) Once trough is level, trough should be firmly fixed in position by securing all four stainless steel feet to the ground. 4) Integrated upright posts support lid when in open position. 5) To further secure the trough to the rear wall, an adhesive tape or silicon can be applied to the rear of the splashback or screw holes may also be drilled through the splashback if desired.
